

Efficient and Faster Care Challenge

Team: **KomandaDva**

**HACK
KOSICE**
30-31 March 2019

The Aim

- Build a solution for better healthcare aimed at efficiency and time waste elimination
- To be efficient means to provide care in time and to provide it properly
- Customers: patients, doctors, nurses moving along ambulances, outpatient clinics, hospitals and pharmacies

What We Did

Doctor's record system that uses QR codes, scanners, kiosks and personal mobile phones

This all works together **to save your time**

For Patients

- Help to know the approximate **diagnosis** by **symptoms**
- Suggest **suitable** doctors
- Take a place in the **queue**
- Remind you that your turn is coming soon by **SMS**
- You can work either from a personal **mobile phone** or from a **hospital kiosk**

For Doctors

- Put **in order** queues of patients
- Provide current patient **symptoms**
- Show the whole **history of diseases** on one web page

For Clinics

- Store **all information** about all patients in one place
- **Save** employee **costs**
- Get **satisfied** customers 😎

Compare

Average

Proposed System

Total Time, min

according to a research paper An assessment of patient waiting and consultation time in a primary healthcare clinic (2017, Ahmad et al.)

Technologies

Symptom Checker API

Next Steps

- Kiosk with **built-in**: (1) scanner and (2) wristband printer
- Wristband with **RFID**, **NFC** and **QR code** (3)

(1)

(2)

Conclusion

- Project: <https://github.com/akarazeev/HackKosice>
- Time Waste elimination
- The system saves a lot of time spent on registering a patient
